LDMS USER GROUP MEETING

October 05, 2026

©2026 Open Grid Computing, Inc.

Agenda

- LDMS Routine Test
  - PR Test
  - Regression Test
- V4.5.4 Release
- Q&A

LDMS Routine Test - PR Test

Every PR is built, functional tested, and compatibility checked before merge

- Build across 6 OS targets, including make distcheck and make dist
  - Alma 8/9
  - CentOS 7
  - openSUSE 15
  - Ubuntu 22.04/24.04
- Install + simple functional test (IPv4 & IPv4+6)
  - Exercise Python interface and ldmsd sampling and aggregation
- Compatibility check vs. OVIS-4.3.3
  - Sampler (v4.3.3) -> L1 agg (latest) chain
  - Plus an enum-symbol stability check
- .github/workflow

Runs on every push/PR to main and b4.5

LDMS Regression Test

Regression testing runs real LDMS clusters, not just unit tests

- Execute the test scripts in ovis-hpc/ldms-test
- Spin up multi-node LDMS clusters in Docker
- Pass/fail reported by the TADA assertion framework

LDMS Regression Test: Coverage

~65 scenarios cover the daemon end to end

- Daemon control & config
- LDMS set/schema (sets, schema, list, and records)
- LDMS Messages
- ldmsd decomposition
- Slurm & PAPI integration
- Aggregation, transport, and authentication

LDMS Regression Test: When & Where

Checks on a fixed schedule, runs only if the branch moved

- Daily check against main and b4.5
- Run the suite only if the branch tip advanced since last check
- No new commits -> no run
- Executed on OGC's OCI infrastructure, Ubuntu 26.04

Underway

- Hardening the OCI test infrastructure for better resiliency
- Creation of addition of additional system tests

Regression Status Bar (Internal Preview)

- The status bar below is intended for internal use and will not shown on ovis-hpc/ldms
- This differs from what was stated on Oct 5
- Details on how regression results will be shared will follow

V4.5.4 Release Readiness

V4.5.4 is ready

- Code & regression coverage: solid
- No blocking items
- Release cut by early next week
  - An email will be sent out

What's new in v4.5.4 will be covered separately at release cut

Q & A

OGC

Sandia National Laboratories

Thank you!
