LDMS USER GROUP MEETING

April 6, 2026

Agenda

- LDMSCON2026
- LDMS Multi-Tenant Security Working Group
- Q&A

LDMSCON2026

LDMSCON2026 - Register Now!

LDMSCON2026 · June 9–11, 2026 · David Rubenstein Forum, University of Chicago

Join the LDMS community for three days to for shared experience, open discussion, and the future of HPC monitoring.

Deadline: May 15

<https://ldmscon2026.eventbrite.com/>

What Should We Talk About at LDMSCON2026?

We want to hear from you.

- What topics under multi-tenant would benefit from a deeper conversation in Chicago?
- What topics outside of multi-tenant should we discuss at LDMSCON2026?

Submission deadline: May 1, 2026 – 3 weeks away!

Submit via EasyChair: easychair.org/conferences/?conf=ldmscon2026

LDMS Multi-Tenant Security Working Group – Kickoff Recap

Multi-Tenant Security WG — Security challenges identified

OGC

Sandia
National
Laboratories

- **Identity verification across container/host boundary** — Idmsd on neither side can verify the other's identity; a compromised container could inject fabricated metrics and fake who they are
- **UID/GID namespace isolation breaks identity assertions** — container UIDs are assigned independently from host UIDs, so the same numeric ID refers to different principals across the boundary
- **LDMS lacks a sufficient access control mechanism for multi-tenant environments** — current Unix file permissions cannot express who among multiple groups can access which metrics, nor enforce those rules across container and host boundaries

Multi-Tenant Security WG —

Two approaches under investigation

- **Certificate-based authentication** — uses signed credentials to verify identity at connection time. Directly addresses identity verification across boundaries and the lack of portable credentials across domains
- **Unix domain socket transport** — uses the OS-level socket as the trust anchor, scoped to the local filesystem namespace. Addresses intra-node container-to-aggregator hops but does not extend to cloud environments

Multi-Tenant Security WG — Next Meeting Schedule

When:

- This Friday, April 10 @ 12 - 1:30 PM CDT

Zoom Link:

- A calendar invite has been sent to the group mailing list

If you want to join the working group and haven't received an invite, please email Nichamon (nichamon@ogc.us).

Q & A

- How to make deployment easier
 - Make sampler daemon also tell aggregator what sets it has. This will reduce aggregator configuration
 - We could have a simple default configuration for deployment which can be customized for optimization. So the initial deployment is easy
- Chris brought up that the advertisement doesn't support when sampler daemon and aggregator are run by different users

Thank you!
